Exploratorium

Snacks:

Bite-Sized, Hands-On Science Activities Can Help You Make A Science Meal

OPEN TO ALL K-12 TEACHERS, UC STAFF/FACULTY, CALTEACH STUDENTS AND PRESERVICE TEACHERS

February 11 from 5 pm to 6:30 pm

Presented by: Zeke Kossover

Before starting at the Exploratorium in the Teacher Institute, Zeke Kossover taught high school science for 21 years. He believes that science education starts when students construct their own understanding of the world. He has won many science awards, including the Albert Einstein Distinguished Educator Fellowship which he served at the National Science Foundation. During his time there he worked with Congress and the White House on important science education issues. In addition, he has worked as a science advisor for both NBC and Discovery.

The Exploratorium has published online for free more than 250 science activities for teachers, students, and parents. Snacks are scaled-down classroom versions of our unique exhibits which are designed to help people investigate scientific phenomena directly. Written in a collaboration between science teachers and scientists and tested with teachers and students before being published, you'll know that they work. Each also includes a discussion of the science. Over the last year, we've reexamined our Snacks to make them more versatile for online and hybrid use, and we are adding new Snacks every year. Come play with a few snacks that will just use some materials you already have around the house. Bring pennies, a condiment of your choice, some string or a shoelace, a piece of metal that you can tie to the string like a spoon, and some Scotch tape and play your way into discovering our catalog of free materials..
